DIRECTORS' REPORT FOR THE QUARTER ENDED MARCH 31, 2022

It is a matter of honor for me to present on behalf of the Board of Directors (BODs) of 786 Investments Limited ("786" or the "Company") the reviewed financial statements of 786 along with the auditors reviewed report for the quarter ended March 31, 2022.

ECONOMY, MARKET & STOCK REVIEW

Economy Review & Outlook:

During the first quarter of the calendar year, Pakistan's economy maintained the growth momentum that had begun during FY21. Both the supply and demand sides contributed to this momentum. Higher economic activity contributed to improved tax revenues and a lower fiscal deficit. However, the substantial increase in global commodity prices contributed to in a build-up in inflationary pressures and a widening current account deficit.

On the monetary side, the availability of affordable credit played a major role in propping up industrial activity, especially in the wake of rising input costs. Commercial banks' lending to private sector businesses rose by Rs.177.4 billion during first three months of FY22, compared to a net retirement of Rs.101.4 billion witnessed last year. Textiles, edible oil companies and oil refineries borrowed heavily for working capital, partly due to higher imported input costs. For export-oriented industries like textiles, the Export Finance Scheme and the Long-Term Financing Facility, along with continued disbursements under the Temporary Economic Refinance Facility, allowed them to borrow at concessional rates for working capital and fixed investment purposes respectively.

SBP External Relations Department report points out that this increased economic activity - coupled with rising imports, withdrawal of corporate income tax exemptions, increase in domestic prices, tax administration efforts and some budgetary measures - contributed to the sizable 38.3 percent growth in FBR taxes during first three months of FY22. The higher revenues allowed for a substantial rise in non-interest expenditures, stemming from an increase in development spending, purchase of Covid-19 vaccines, and power sector subsidies. As a result, the primary balance continued to remain in surplus. The fiscal position also materially benefited from the reduction in interest payments on both domestic and external debt. As a result, the fiscal deficit reduced to 0.8 percent of GDP from 1.0 percent last vegar.

Money Market Review & Outlook

Pakistan's central bank raised interest rates by 250 basis points following an emergency meeting, as escalating political chaos at home and higher global oil prices threaten to spill over into a full blown economic crisis.

The key rate now stands at 12.25%, as stated by State Bank of Pakistan. This makes the real rate "mildly positive" and will help preserve external and price stability. "Heightened domestic political uncertainty" contributed to a 5% depreciation in the rupee, triggered a surge in local bond yields as well as Pakistan's Eurobond yields and CDS spreads, the central bank said. Oil prices will probably stay high and the U.S. Federal Reserve is also likely to tighten quicker than previously anticipated.

The extra yield investors demand to hold Pakistan's sovereign debt, on average, over U.S. Treasuries widened by 8 basis points on Thursday to 10.73 percentage points, according to JPMorgan Chase & Co. data, just above the 10-percentage point threshold for distressed debt. The rupee dropped 1.1%, most in two years, to a record low of 188.18 a dollar by the start of April-2022. Apart from money from the IMF, Pakistan's political situation is also contributing to delays in a planned \$1 billion green bond sale. A refinancing from China is also awaited — the repayment in recent weeks had triggered the biggest drop in Pakistan's foreign-exchange reserves in data going back to 2010.

Pakistan's central bank had warned in its meeting held in March-2022 that it may meet earlier than scheduled to contain any blowout. It raised its average inflation forecast to slightly above 11% for the fiscal year ending June from 9%-11%.

Stock Market Review & Outlook:

Amid looming uncertainty on the political front and rising oil prices in the international market, the bears regained control of the Pakistan stock market in the outgoing week, droving the index back into the negative territory. The benchmark KSE-100 index dropped 898 points or 2.02% to close at 43,653 points.

The market commenced the week on a negative note on wiping-off 1,284 points day-on-day as international oil prices touched a 14-year high (Brent rose to \$139 per barrel) since US and EU discussed banning Russian oil imports, raising concerns over the current account position. Moreover, the submission of a no-confidence motion against Prime Minister Imran Khan by the Opposition parties in the National Assembly added to the woes of the investors.

Later during the week, the international oil prices witnessed a hefty drop led by a statement from UAE's ambassador to the USA urging OPEC to increase production, which cushioned the overall dip (adding back 810 points day-on-day to the index). Other major developments during the week were: Engro Powergen Thar Limited (EPTL) said the recent explosion caused no major damage, 6-month KIBOR reached 11.93%, foreign exchange reserves decline \$207 million, UAE wants to acquire Guddu Power Plant, and Oil and Gas Regulatory Authority (OGRA) backs diversifying oil suppliers, inter oil marketing companies (OMCs) sales. Meanwhile, foreign selling was witnessed this week, clocking in at \$3.13 million against a net sell of \$0.97 million recorded last week. Selling was witnessed in banks (\$4.4 million), and textiles (\$0.4 million).

Company Performance Review:

The Company's gross earnings during the period stood at PKR 12.43 million as compared to PKR 10.65 million in the same period last year. Total expenses were PKR 19.72 million as compared to PKR 17.21 million in the same period last year. Share of associates shows a Profit of PKR 13.09 million as compared to PKR 5.076 million the same period last year. Net Profit for the period was PKR 4.03 million as opposed to a profit of PKR 3.94 million in the same period last year.

Future Plans:

786IL in anticipation of post COVID-19, is keen to strategically focus on ease of both operations and customer access to information and our team, maintaining post COVID-19 measures with an emphasis on virtual, safer communications and elimination of paper for reasons of health and safety, as well as to be a more sustainable, purpose-driven, eco-friendly role model among asset management companies.

Our objective for the year is to grow Asset under Managements (AUM) through an effective virtual, social media driven sales strategy.

Acknowledgement:

The Directors wish to express their gratitude to the Securities & Exchange Commission of Pakistan (SECP) and other regulatory bodies for their valuable support, assistance, and guidance. The Board also thanks the employees of the Asset Management Company, the Trustee for their dedication and hard work, and the unitholders for their confidence in the Management.

18.1 Diluted earning/(loss) per share has not been presented as the Company does not have any convertible instruments in issue as at March 31, 2022 and March 31, 2021 which would have any effect on the earning per share if the option to convert is exercised.

19 FAIR VALUE ESTIMATION

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Consequently, differences can arise between carrying values and the fair value estimates.

Underlying the definition of fair value is the presumption that the Company is a going concern without any intention or requirement to curtail materially the scale of its operations or to undertake a transaction on adverse terms.

19.1 Fair value hierarchy

Fair values are categorized into different levels in a fair value hierarchy based on the inputs used in the valuation techniques as follows:

- Level 1: fair value measurements are those derived from quoted prices (unadjusted) in active markets for identical assets or liabilities.
- **Level 2:** fair value measurements are those derived from inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices).
- **Level 3:** fair value measurement are those derived from valuation techniques that include inputs for the asset or liability that are not based on observable market data (unobservable inputs).

If the inputs used to measure the fair value of financial asset fall into different levels of the fair value hierarchy, then the fair value measurement is categorized in its entirety in the same level of the fair value hierarchy as the lowest level input that is significant to the entire measurement.

For assets that are recognised in the financial statements at fair value on a recurring basis, the Modaraba recognises transfers between levels of the fair value hierarchy at the end of the reporting period during which the change has occurred. There were no transfers between different levels of fair values mentioned below.

The table below shows the carrying amounts and fair values of a financial asset and financial liability including their fair value hierarchy for financial instruments measured at fair value.
